**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 6, 10 and 18-20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ives (US Patent 4,239,580).

Ives discloses a method and apparatus for applying resin-impregnated fabric to a substrate. As shown in Fig. 1, applicator 10 feeds fabric from rolls 30 and 32 through a resin impregnator. The impregnated fabric is fed to vibrating roll assembly, which applies the fabric across mold 20 (see col. 5, line 36 through col. 6, line 2). Thus the resin impregnated fabric corresponds to applicant's claimed adhesive tape, framework 22 corresponds to applicant's claimed holding means and mold 20 corresponds to applicant's claimed workpiece.

Regarding claims 18-20, the applicant is reminded that the materials used (i.e. strip form, label, semiconductor wafer) are not germane to the patentability of an apparatus claim.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1734

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4-5, 7-9, 11-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ives as described above in paragraph 2.

Regarding claims 4-5 and 11-12, it is the examiner's position that heating means and cutting means are within the purview of one having ordinary skill in the art and would have been obvious to employ in the above described system of Ives based upon physical requirements of the materials employed in manufacturing.

Regarding claims 7-9, without the disclosure of unexpected results, it is the examiner's position that the specific materials employ (i.e. strip form, label, semiconductor wafer) are well known and conventional in the art and would have been obvious to employ in the above described system of Ives as a matter of design choice based upon desired properties of the materials being manufactured.

Regarding claims 13-17, it is the examiner's position that electromagnetic and rotating eccentric vibration generating means are both well known and conventional in the art. Therefore, it would have been obvious to one having ordinary skill in the art to employ such electromagnetic or rotating eccentric vibration generating means in the system of Ives described above in order to facilitate vibration of the materials.

### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.
